

N4L's Security Team

Like a friendly neighbour, our team keeps an eye on your digital infrastructure.

N4L's security experts will let you know if they see a risk or threat to your network that you need to be aware of.

Security Improvements

An open window or door is like a misconfiguration that leaves a school at risk. This is not a vulnerability but rather an issue of best practice.

N4L will help with improvements to network configuration, system firewall rules and email configuration.

Vulnerability

Like a broken lock on your door, a vulnerability is something that has an exploitable weak spot.

N4L can help identify vulnerabilities and work with you to fix them.

Incident

This is like an intruder or break-in on your property - an incident has occurred. Our team will help support you with the incident response.

N4L's security experts will help identify phishing, email compromises and malware incidents at your school.
