

# Guest access for your Secure Access network

There are many types of school guests, including community members, requiring different levels of access to school networks across Aotearoa.

We now offer schools the choice between 2 types of guest access: our standard voucher-based system, or a simplified option using a single password, which was developed following school feedback. While the simplified guest access option helps schools who don't have a lot of time to manage their Guest network, it's important to note the below control and security limitations.

	Guest access	Simplified guest access
<b>How it works</b>	Unique voucher system with <b>daily</b> voucher codes generated for each user	Single password for all guests (with <b>no expiry</b> date). Password changes can be requested by the school
<b>Effort involved</b>	Administration required to generate vouchers for multiple guests via Guest Voucher Portal	Share password with your guest
<b>Control levels</b>	Full control over who's accessing the network and visibility of individual guest identities	Potential loss of control over who's accessing the network and no visibility of individual guest identities
<b>Security risk profile</b>	Additional layer of protection, in line with recommended guidelines	Potential for your students to access it and avoid the existing restrictions of the Student network

Before the Secure Access Migration day our appointed panel member will assist you with the decision to choose the option most suitable for your school and our friendly team will be able to set it up for you.

Remember to advise your school guests of the type of access you've decided to use. The process for them to access your Guest network is available [here](#) and a couple of steps to use simplified guest access can be found [here](#).

Please contact us on [support@n4l.co.nz](mailto:support@n4l.co.nz) or **0800 LEARNING** Monday – Friday, 8am to 5pm  
***Our friendly team will be able to set up for you the simplified guest access option.***
